

Pharmacotherapy Assessment Checklist*

Determine the presence of any of the following medication therapy problems in a patient's current medication therapy:

- Medication used with no medical indication
- Patient has medical conditions for which there is no medication prescribed
- Medication prescribed inappropriately for a particular medical condition
- Immunization regimen is incomplete
- Current medication therapy regimen contains something inappropriate (dose, dosage form, duration, schedule, route of administration, method of administration)
- There is therapeutic duplication
- Medication to which the patient is allergic has been prescribed
- There are adverse drug or device-related events or potential for such events
- There are clinically significant drug-drug, drug-disease, drug-nutrient, or drug-laboratory test interactions or potential for such interactions
- Medical therapy has been interfered with by social, recreational, nonprescription, or nontraditional drug use by the patient or others
- Patient not receiving full benefit of prescribed medication therapy
- There are problems arising from the financial impact of medication therapy on the patient
- Patient lacks understanding of medication therapy
- Patient not adhering to medication regimen
